

**The Canopy project shares information about schools engaged in innovation to advance equity and student-centered learning.** Every year, schools nominated to the project share the practices they're implementing in a survey. With this information, we used a statistical process to cluster practices that tend to show up in schools' data together—in other words, a bottom-up approach that helps reveal themes among schools' practices. We found four distinct themes.

### THEME 3: DEEPER LEARNING FOR MASTERY

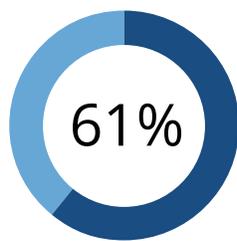

In schools implementing these kinds of practices, students show their skills and knowledge through performance assessments rather than traditional tests. Instead of earning credit for learning by finishing a time-based course and getting a passing grade, they earn credit by showing they've mastered specific skills or content areas. They're expected to demonstrate or defend their learning through portfolios and presentations of learning, and they're evaluated on measures of success that go beyond traditional academic test scores, such as assessments designed to capture evidence of deeper learning. They may learn in multi-age groups of students, organized by interest or skill, rather than always being grouped in age-graded classrooms. Their schools may also invest in student leadership skills through structures like advisory groups or student-led conferences.

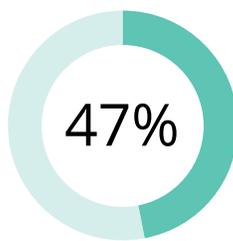

#### PERCENTAGE OF 251 CANOPY SCHOOLS THAT REPORTED KEY PRACTICES IN THIS THEME

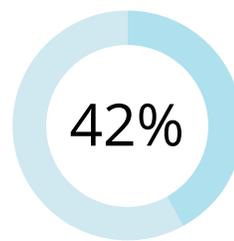

Interdisciplinary

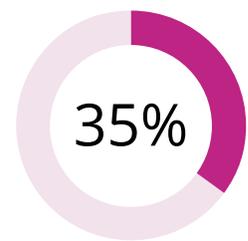

Competency/mastery-based education

Multi-age classrooms

Design thinking process
